

CAREER EDUCATION DAY AT LIEPORIAI GYMNASIUM

7th of September - this is the day of the career education at Lieporiai gymnasium, during which all our gymnasium pupils went to different companies, institutions and organizations of Šiauliai city and got acquainted with different professions there. Today's goal is to introduce

students to the diversity of professions and thus encourage them to start preparing for a successful career. It is very important for pupils to find out about their work and career prospects directly from adults working in different fields. The policeman, the banker or the programmer can tell the best themselves about their everyday they work. So, high school students improved their career advancement competencies, met the world of work and various professions. The purpose of career education is to enable all students to develop their career competences (knowledge, skills and self-esteem, learning, self-expression and job

opportunities, career decision-making, career planning, alignment with other areas of life, and realization) that are important for successful learning direction, profession or work activity, move from the teaching environment to the work environment, as well as further professional development and learning.
